

PATENT
Attorney Docket No. UCSD-04726

AMENDMENTS TO THE SPECIFICATION

Replace the paragraph on page 9, beginning on line 1, which starts with "Figure 5" with the following paragraph:

Figure 5 shows XPS-survey spectra of (A) freshly cleaved mica and (B) GFPR6 immobilized to mica. The binding strength of bound GFPR6 and GFPR6 ((C) and (E)), and of bound GFPH3 ((D)) to mica after washing with increasing amounts of NaCl and KCl is shown in (C) as monitored by the XPS N1s narrow scans (arbitrary units and normalized to the Si1s signal). The dashed line means no photoelectron counts.
